PROJECTS

ONLINE FOOD ORDERING SYSTEM

The online food ordering system sets up a food menu online and customers can easily place the order as per they like. Also with a food menu, online customers can easily track the orders. I worked on the front end of the project using HTML and CSS while my teammate worked with javascript

Next word prediction

This project facilitates typing on a mobile device by suggesting words the end user may wish to insert in a text field. It also increases writing fluency, allowing students to generate more writing skills. We used the concepts NLP and LSTM. I worked on data pre-processing, tokenisation and text analysis.

SKIN CANCER DETECTION

This project was designed to detect skin cancer by analyzing photos of patches on skin. We provided large number of datasets to increase the accuracy of results. I helped in data collection and image preprocessing.
